# Delta Offers Air Travelers New Speed and Comfort at No Additional Cost

Big, fast and luxurious Super-Detaliners are now in operation on express flights over Delta routes. When war's end made additional planes available, Delta ordered a fleet of four-engined Douglas DC-4 airliners to bring you this increased luxury in air transportation.

You will experience a new thrill in flying when you relax in a Super-Detaliner. There's more speed, more space, more comfort. You travel faster, make fewer

stops and save more time. Super-Detaliners have been placed on express flights to permit full utilization of their long-range characteristics.

These big planes in use on express flights supplement Delta's ever-increasing fleet of 21-passenger Douglas DC-3's. Together, the two types of planes offer you complete, efficient air transportation over the entire Delta system.

Delta fares are identical for both DC-4 and DC-3 planes.

## Double Capacity

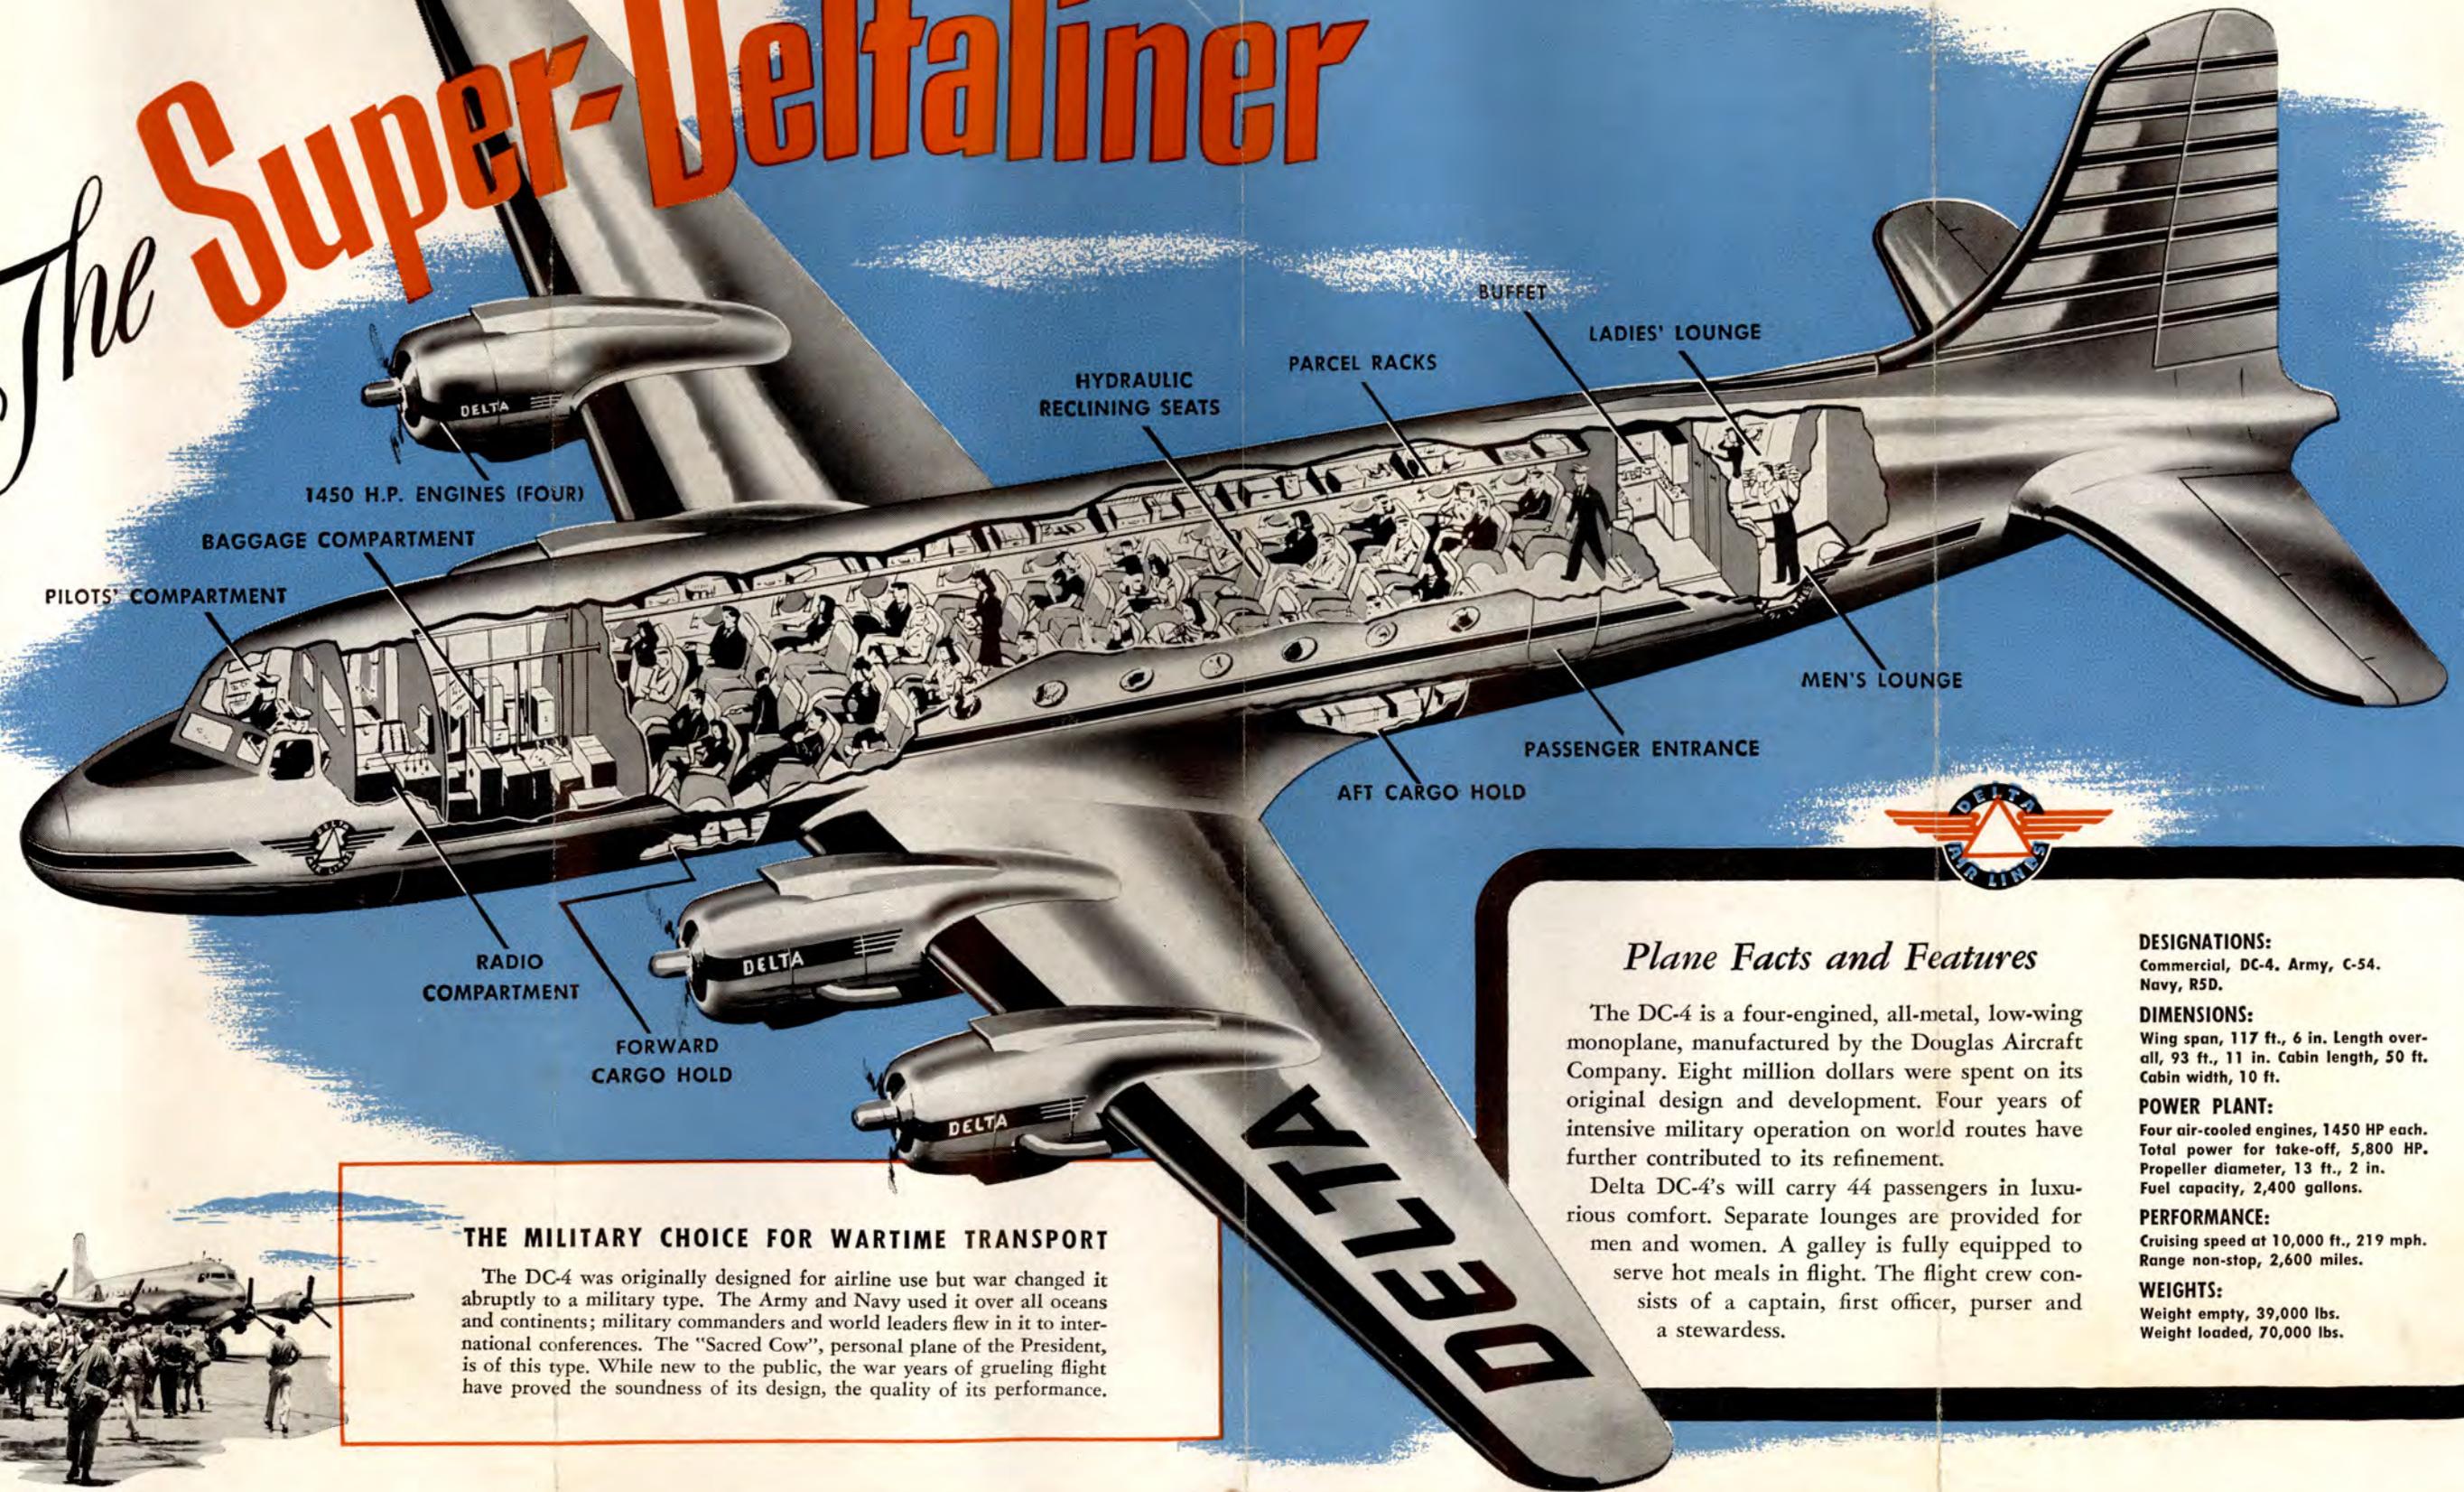

Delta's DC-4's carry 44 passengers, more than double the capacity of the DC-3. Air Express and baggage loads are likewise more than doubled.

## Plane Facts and Features

The DC-4 is a four-engined, all-metal, low-wing monoplane, manufactured by the Douglas Aircraft Company. Eight million dollars were spent on its original design and development. Four years of intensive military operation on world routes have further contributed to its refinement.

Delta DC-4's will carry 44 passengers in luxurious comfort. Separate lounges are provided for men and women. A galley is fully equipped to serve hot meals in flight. The flight crew consists of a captain, first officer, purser and a stewardess.

### DESIGNATIONS:

Commercial, DC-4. Army, C-54.  
Navy, R5D.

### DIMENSIONS:

Wing span, 117 ft., 6 in. Length overall, 93 ft., 11 in. Cabin length, 50 ft. Cabin width, 10 ft.

### POWER PLANT:

Four air-cooled engines, 1450 HP each. Total power for take-off, 5,800 HP. Propeller diameter, 13 ft., 2 in. Fuel capacity, 2,400 gallons.

### PERFORMANCE:

Cruising speed at 10,000 ft., 219 mph. Range non-stop, 2,600 miles.

### WEIGHTS:

Weight empty, 39,000 lbs.  
Weight loaded, 70,000 lbs.

## THE MILITARY CHOICE FOR WARTIME TRANSPORT

The DC-4 was originally designed for airline use but war changed it abruptly to a military type. The Army and Navy used it over all oceans and continents; military commanders and world leaders flew in it to international conferences. The "Sacred Cow", personal plane of the President, is of this type. While new to the public, the war years of grueling flight have proved the soundness of its design, the quality of its performance.

## Typical Delta Fares

From	To	Fare
Chicago	Miami	\$59.00
